

# HOW TO EXPORT YOUR DATABASE (YOU'RE ALREADY ON THE RIGHT PAGE)

## 1 Export method:

Select:

✓ Quick – display only minimal options

## 2 Format:

Select:

✓ SQL

## 3 Scroll down and click:

 Go

Your browser will download a file like:

```
backup_system.sql  
your_database_name.sql
```

---

## After you download it — upload it here

Just send the SQL file so I can help you import it into your online database (Railway / PlanetScale / etc.).

## After you upload it, I will:

- ✓ Check if the SQL file is clean
  - ✓ Tell you which import method will work
  - ✓ Help you set up Railway MySQL
  - ✓ Prepare your backend `db.js` file
  - ✓ Make your whole system run online
-

✓ **Go ahead — click Go, download the SQL file, then upload it here.**

Perfect — you are on the **correct export screen** now.  
You only need to do **one last click**:

---

## ✓ **FINAL STEPS (DO THIS NOW)**

✓ **Export method:**

Keep it as **Quick**

✓ **Format:**

Keep it as **SQL**

☞ **Then click the “Go” button at the bottom.**

Your browser will download a file immediately:

`your_database_name.sql`

---

## ✚ **AFTER IT DOWNLOADS**

**Upload that .sql file here** so I can move it to your online database.

I'll take care of:

- ✓ Importing it to Railway
  - ✓ Fixing any errors inside the SQL
  - ✓ Updating your backend connection
  - ✓ Verifying everything works online
- 

Just export → download → upload it here.
